Review the work before you count it

Eight checks to choose from for a small agency AI practice task. Use the check that fits the work you are reviewing.

01 Commission-row matching

Keep identifiers as text, including leading zeros. Preserve signed amounts and leave ambiguous matches unresolved.

02 Source-note lookup

Keep the note ID and the exact supporting passage. Leave an absent date or confirmation unresolved.

03 Cost per checked result

Include preparation, review and corrections. Missing inputs are not zero; generated drafts are not checked results.

04 Link review

Check page access, the intended action and delivery separately. A page opening does not prove the next step worked.

05 Form mapping

Keep the requester, assigned reviewer and completed review distinct. Check each value and its source field.

06 Flag-list review

Look for missed errors outside the flagged list. Count errors found separately from how many flags were useful.

07 Instructions in source messages

Separate task instructions from instructions embedded in a source. Keep ordinary quoted requests as evidence.

08 Whole-request review

Check every question as well as every added claim. An accurate opening does not answer an omitted question.

Fictional, AI-assisted teaching material. No client data, model benchmark or insurance/accounting advice.
Tyler Mayberry / Cirlet | 22 October 2026

Pick one practice task

Each title opens its exercise. Try the fictional inputs before opening the separate authored review key. The key is teaching material, not a measured model result.

01 **Commission-row matching**

Start with the fictional register and statement rows.

02 **Source-note lookup**

Find the supporting note without inventing missing evidence.

03 **Cost per checked result**

Try eight fictional arithmetic cases and a separate key.

04 **Link review**

Compare the evidence for three different link outcomes.

05 **Form mapping**

Map one fictional request into different form layouts.

06 **Flag-list review**

Review an authored flag list against the source and draft.

07 **Instructions in source messages**

Review three fictional messages and preserve missing evidence.

08 **Whole-request review**

Find an omitted answer and unsupported claims in a fictional reply.
