Review a filled form against its source

Print pages 1–3 to try the exercise. Keep page 4, the answer key, aside until you finish. All names, references and dates are invented.

Your source record

Source ID	Field	Value
REQ-01	request_reference	R-017
REQ-01	client_name	Harbor Lantern Workshop
REQ-01	policy_reference	000472
REQ-01	requested_by	Alex Rivers
REQ-01	received_date	2026-10-03
REQ-01	requested_due_date	2026-10-06

Use only this record. Each entry must have both a supported value and the correct source field. Leave unsupported information blank and explain what is missing. Preserve policy reference **000472** as text.

A requested due date is a request, not a completion promise. The requester is not automatically a reviewer. This fictional source contains no completed review event.

Prepared for Tyler Mayberry’s review-practice collection with AI assistance. No real customer records, carrier forms or model tests are included.

The deliberately flawed draft

Some rows are correct. Others contain planted errors. Review all seven against page 1; do not assume a plausible entry or a source label is enough. This was authored as teaching material, not produced by a tested model.

ID / field	Proposed value	Proposed source
B1 / Reviewed by	Alex Rivers	REQ-01 / requested_by
B2 / Requested due date	2026-10-03	REQ-01 / received_date
B3 / Request reference	R-017	REQ-01 / policy_reference
B4 / Policy reference	472	REQ-01 / policy_reference
B5 / Client	Harbor Lantern Workshop	REQ-01 / client_name
B6 / Request received on	2026-10-03	REQ-01 / received_date
B7 / Request came from	Alex Rivers	REQ-01 / requested_by

On page 3, decide whether to keep the row, change its value or source reference, or leave the value blank. Write the supporting source field or the missing evidence.

This exercise ends with proposed internal entries. It does not establish approval, coverage, completion, sending or compatibility with a real system.

Your review sheet

Name (optional): _____ Date: _____

For each row, write your decision, corrected value if needed, and exact supporting field or missing evidence. A correct value can still need a citation correction.

Row	Keep / change / blank	Corrected value	Source field or missing evidence
B1 Reviewed by			
B2 Requested due date			
B3 Request reference			
B4 Policy reference			
B5 Client			
B6 Request received on			
B7 Request came from			

Finish your review before opening the key. Count rows needing a change separately from the number of edits you make.

Separate authored answer key

Four rows need a change. Three can remain. This count describes deliberately planted errors; it is not a model accuracy score or a production acceptance threshold.

Row	Corrected entry / decision	Reason and evidence
B1 Reviewed by	Leave blank	No review event or reviewer supplied. Remove Alex Rivers; requested_by establishes the requester only.
B2 Requested due date	2026-10-06	REQ-01 / requested_due_date. Change both the value and its citation. The received date answers a different question.
B3 Request reference	Keep R-017; change citation	REQ-01 / request_reference. The proposed value is correct, but policy_reference does not support it.
B4 Policy reference	000472	REQ-01 / policy_reference. Preserve every digit, including the leading zeros.
B5 Client	Keep Harbor Lantern Workshop	REQ-01 / client_name.
B6 Request received on	Keep 2026-10-03	REQ-01 / received_date.
B7 Request came from	Keep Alex Rivers	REQ-01 / requested_by.

If using CSV software, import identifiers as text and recheck exported values. A finished practice sheet is not proof that a real request was reviewed or sent.

Source files and separate keys: GitHub form-mapping practice. Context: agency practice guide.
